Examines food and agriculture from "farm to fork" using a sociological lens

Using a sociological lens, this book examines food and agriculture from "farm-to-fork". It presents 20 sociological lessons on food and agriculture written by both established and up-and-coming scholars. Each lesson is written in an accessible and engaging format. The chapters incorporate historical and contemporary topics and examples, and discuss "hot button" issues wherever relevant. The book draws primarily on cases and issues in the United States, but given the global character of food and agriculture it also incorporates relevant examples from other countries.

- Clearly organized ("farm-to-fork")
- Comprehensive and accessible
- Focuses on environmental issues
- Includes chapters on obesity, organics, and fair trade
- A diverse array of contributors brings their teaching expertise to bear on these subjects
